DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/10/2003 has been entered.

Status of Claims

2. Applicant's amendment filed 9/10/2003 in Paper No. 21 is acknowledged and entered. Claims 1-68 are canceled by the amendment. Claims 69-86 are added by the amendment.
3. Claims 69-86 are pending.

Election/Restrictions

4. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 69-79, and 85-86, are drawn to a system for conducting an experiment on biological cells, classified in class 435, subclass 285.2.
 - II. Claims 80-84, are drawn to an array system, classified in class 435, subclass 287.2.

Art Unit: 1639

The inventions are distinct, each from the other because of the following reasons:

5. Inventions of Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions (system/apparatus) as claimed have different required components that have different functions and effects.

The combination of features of the carriers having different code indicating a different class of cells and an image system that develop a mask for the carriers of Group I are not required by the claims of Groups II. The feature of an image system that uses code information from the image analysis system to interpret experiments on the analytes of Group II is not required by the claims of Groups I.

6. Because these inventions are distinct for the reasons given above and the searches required are not co-extensive thus requiring a burdensome search, restriction for examination purposes as indicated is proper. Additionally, different patentability considerations are involved for each group. For example, a patentability determination for Group I would involve a determination of the patentability of the combination of the carriers having different code indicating a different class of cells and an image system that develop a mask for the carriers (independent of its use) while a patentability determination for Group II would involve a consideration of the patentability of the image analysis system to interpret experiments on the analytes. These considerations are very different in nature.

Art Unit: 1639

Even though some of the groups are classified in the same class and/or subclass, this has no effect on the non-patent literature search. Different groups would require completely different searches in non-patent databases, and there is no exception that the searches would be co-extensive.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
